

CYRUS ONE

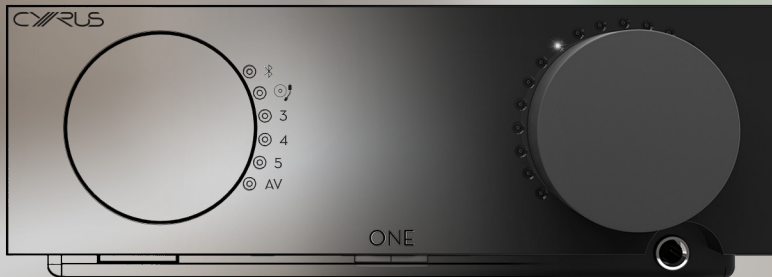

Introduction to Cyrus

Cyrus is a British specialist audio company, manufacturing precision hi-fi equipment. Built around its Research and Development team, Cyrus is internationally recognised as a leader in audio engineering.

Traditionally, budget amplification was considered to have “budget sound”. The appearance of the original Cyrus 1 in 1984 exploded this myth and revolutionised the audio industry. It demonstrated unequivocally that an audiophile integrated amplifier was well within the grasp of music lovers who may not have had the funds to indulge in exotic equipment, setting a new industry benchmark and kicking off an entire generation of Cyrus owners.

Since then, Cyrus has engineered some of the world’s most advanced hi-fi components. The devotion to sonic perfection has made Cyrus one of the industry’s most respected brands. By taking the original concept and bringing it right up to date, the 2016 Cyrus ONE is set to transform the sound of any modern day source, and introduce the Cyrus musical experience to the latest generation of music lovers.

Technically inspired design

The Cyrus ONE is designed in a clean, simple, elegant non-ferrous chassis that minimizes eddy currents and reduces pickup of external noise. Extensive mains supply filtering is used to reduce the impact of this noise which has the ability to colour the audio performance.

Featuring Cyrus's own 3rd generation Class D amplifier providing 2 x 100W of power, aptX® compatible *Bluetooth*® connection, a dedicated high power, high voltage class AB headphone amplifier, MM Phono stage, and 4 line level inputs. This high performance solution will form the heart of many different lifestyle systems. The infrared remote can control volume and switch inputs, as well as adjusting the brightness of the display LEDs to suit your listening environment. And, because it is made by Cyrus, class leading musical performance is guaranteed.

Connectivity

- Built-in MM Phono stage
- aptX® compatible *Bluetooth*
- Pre outputs – connection to additional power amplifiers
- 4 line level inputs – Including AV Bypass
- High power, high voltage class AB headphone amplifier
- Bi-wire compatible speaker binding posts

Control

- IR remote control
- User upgradable firmware – updates to the latest firmware for new features in your own home

Technical Features

- Cyrus 3rd generation hybrid Class D amplifier – outputs 2 x 100W (into 6 Ω at 0.1% THD+N)
- SID – Speaker Impedance Detection
- Large toroidal transformer – linear power supply throughout for minimal noise separation of different circuits
- Thirteen separate power supplies – to maximise separation of different circuits

Dimensions & Finish

- Dimensions: (H X W X D) – 85 x 220 x 390mm
- Weight – 5.6kg
- Textured, rubberised and high gloss black finish

Product Features & Benefits

High Power Amplifier

2 x 100W gives class leading power output that will drive most loudspeakers regardless of their size. All that power enables Cyrus ONE to present your music with a huge dynamic range, giving 3D detail and bags of energy without the need to buy big, bulky, inefficient amplifier boxes.

Class AB Headphone Amplifier

The high power, high voltage class AB headphone amplifier will drive almost all headphones with ease and with an output on the front, the Cyrus ONE offers a level of musical performance for the personal listening experience that is also easy and convenient.

Bluetooth Enabled (aptX®)

aptX® compatible *Bluetooth* enables you to stream music from your phone/tablet or computer via a wireless *Bluetooth* connection, providing maximum flexibility without the need for a home network or any complicated set up. This allows everyone in the family to enjoy their music from their portable devices quickly and easily.

Speaker Impedance Adjustment

SID – Speaker Impedance Detection automatically matches the amplifier's output response to the electrical load of the loudspeakers. This means that matching Cyrus ONE to any brand of loudspeaker has suddenly been made so much easier.

Product Features & Benefits

Pre Amplifier Outputs

Pre Out sockets on the rear panel allow the connection of additional power amplifiers for system upgrades to drive more demanding loudspeakers. This means that Cyrus ONE is not limited by its size or power output for any loudspeaker you may choose.

Moving Magnet Phono Stage

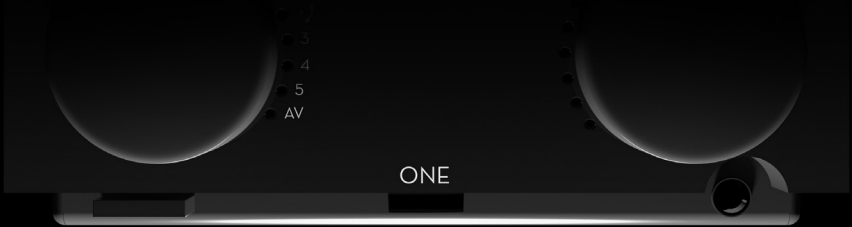

Cyrus ONE features a built-in phono stage that is compatible with all moving magnet cartridges and requires no adjustment or extra set up, enabling you to play all of your favourite vinyl from most turntables.

Stunning Modern Design

The striking design incorporates white LEDs to signify the input selected and the volume setting during playback. The intensity of these LEDs can be adjusted to suit the lighting in the local environment. With textured soft feel controls, a highly polished faceplate and carefully chosen paint finishes; the Cyrus ONE will look stunning in any environment.

AV Direct

The ability to run the Cyrus ONE as a power amplifier in AV bypass mode enables it to be easily integrated into any home theatre system whilst still offering amazing musical performance.
