

Gold-plated single, screw-on, banana-plug speaker terminals ready

Bass-Reflex port on the front

WILSON RAPTOR 9

Wilson Raptor 9 are the largest and most powerful floor standing speakers in the Raptor series. The classic and timeless design of the Raptor 9 speakers offers two classic colors of finish - black and white - made of high-quality vinyl, with a structure that is delusionally reminiscent of a wood surface finished with a light sheen across the side, top, and back. The front of the cabinet is closed with a glossy panel in white and black respectively.

In addition, the Bass-Reflex port outlet placed in the front allows the speaker to be placed much closer to the wall than would be possible with speakers with a port located in the rear. It proves to be more efficient solution in the low frequency range.

Together with the available acoustically transparent grilles in classic black, mounted on traditional mounting studs, the whole speaker looks attractive and does not disturb the interior with its presence.

White cabinet with wood structure, black grille.

HIGH QUALITY AND PROVEN TECHNOLOGIES

Raptor 9 cabinets are a three-way construction, and their character and power suggest their use in larger puppy rooms, where they will be able to develop their full acoustic capabilities. The rigidity of the cabinet' construction and their susceptibility to vibrations are ensured by using thick MDF walls.

The crossover has been arranged in a system ensuring consistency of sound of all elements in this construction. It includes two 16.5 cm woofers, a 13 cm midrange driver and a 2.5 cm tweeter with a textile dome.

The diaphragms of the drivers are made of press- tight cellulose of the highest quality. Thanks to this, the highly desirable stiffness is achieved with their low weight.

High quality loudspeaker terminals provide a secure connection to the cables thanks to both the gold coating of the electrical contact elements and the convenient design of the nuts themselves.

The size, power and well proven in other designs of the brand, the design of the speakers allows for a large music scene offering the possibility of precise location of individual instruments in space. The sound is not aggressive, but at the same time brings a significant load of emotions with a high naturalness and realism, well reproducing the moment of recording songs in the recording studio.

The Raptor 9 loudspeakers considered as a whole are a universal solution for music lovers with a little more space, requiring a seamlessly configured Hi-Fi system, not only from the amplifier fitted with a wide range of power from 50 to 220 W.

Other loudspeakers of the Raptor series : 7, 5, 3, 1, Mini, Vocal, X

FLOORSTANDING SPEAKER	
Recommended amplifier power	50 to 220W
Frequency response (±3dB)	40-20 000 Hz
Sensitivity (2,83V / 1m)	91 dB
Impedance	4-8 Ohm
Tweeter	1" (25 mm) textile soft dome
Midrange driver	5" (130 mm), cellulose membrane
Woofers	2x 6 1/2" (165mm), cellulose membrane
Type of construction	Bass-Reflex
Speaker terminals	single, screwed, gold plated, adapted to banana plugs
Accessories included	spikes
Dimensions (H x W x D)	1160 x 195 x 302 mm
Weight	16,7 kg
Finish	Black EAN: 5903402874093 White EAN: 5903402875014

WILSON BRAND

The Wilson brand was created as a response to the growing market demand for audio equipment made from high quality components, while maintaining an attractive price/quality ratio. With years of experience in developing high-end audio-video products, Wilson's product range engineers were able to optimize and design individual components so that Wilson products satisfy music lovers without draining their wallets, and offer high sound quality for years to come.
